

Jay Kang

SKILLS

Languages & Frameworks : JavaScript, TypeScript, React, Next.js, Node.js, PHP, HTML, CSS, Python

Cloud & Infra: AWS (Lambda, DynamoDB, S3, CloudFront, RDS, EventBridge, SES, VPC, Route 53), Terraform (IaC), Docker, Linux

Databases: PostgreSQL, MySQL, DynamoDB, Supabase, Drizzle ORM, Docker, Linux

AI & Tools : ClaudeAI, Bedrock, Zod, PowerBI, Excel, Git, Docker, Figma, Jira, Asana, Meta Pixel, HubSpot, GA4

WORK EXPERIENCE

World Relief, Remote, U.S.A. (Baltimore, MD HQ)

Software Developer

May 2023 - Present

- Designed and developed a custom donor portal replacing third-party hosted solution, integrating Luminate Online REST API with token-based authentication, session management, and dynamic dashboard rendering
- Architected and implemented website overhaul with Javascript and modern component patterns, collaborating with a UX designer to deliver personalized user experiences, increasing monthly traffic by 32% and contributed to \$10M+ in 2025 online donation revenue.
- Led migration of over 600 static donation forms into 20 dynamic, API-powered forms integrated with Luminate, partnering with Finance to integrate website traffic sources to Raiser's Edge database, enabling source-level attribution for every donation and streamline form creation by 95%.
- Migrated web infrastructure from external to in-house, cutting costs from \$33,000 to \$1,440 annually and introduced a structured development cycle with staging and production environments to enable controlled, review-based deployments.
- Connected GA4 and Meta Pixel into website workflow and CMS and created session-based cookies via JavaScript for campaign tracking and producing ROI reports on ads, email, and content for stakeholders.

Coding Temple, Remote, U.S.A. (Chicago, IL HQ)

Software Engineer Trainee

June 2022 - April 2023

Jesse Brown VA Medical Center, Chicago, IL

Medical Lab Technologist - Generalist

August 2020 - June 2022

PROJECTS

Jungie Studio, jungiestudio.com

November 2025 - Present

- Architected and deployed a serverless Next.js storefront on AWS Lambda via OpenNext behind CloudFront, provisioning the entire cloud footprint as code with Terraform and IAM.
- Engineered an email-based reservation system using PostgreSQL transactions with Drizzle ORM and Zod validation.

WonStock AI, wonstockai.vercel.app

November 2025 - Present

- Designed an event-driven serverless pipeline (AWS Lambda, EventBridge, DynamoDB, S3) ingesting prices, news, SEC filings, and federal policy data from 5 external sources, fully provisioned with Terraform.
- Built a read-through DynamoDB cache refreshed by a daily EventBridge cron that decouples dashboard traffic from upstream APIs — holding third-party usage flat under a 250-request/day free-tier ceiling regardless of page views.

- Integrated a Next.js dashboard on Vercel that securely invokes the AWS backend via signed, scoped-IAM cross-cloud Lambda calls, with Amazon Bedrock (Claude) summarizing filings under a < \$10/mo cost cap.

EDUCATION & CERTIFICATIONS

AWS Certified Solutions Architect — Associate

Obtained March 2026

Marquette University / Milwaukee, WI — Bachelor of Science in Health Sciences

May 2020
